Guideline for SEC column selection by solvent usability

See page 60 for the solvent replaceability of organic solvent SEC (GPC) packed columns.

Precautions for Polar Polymer Analysis

Unexpected interactions in the column can affect the size exclusion chromatography analysis of polar polymers. These interactions may change elution patterns and results in an invalid molecular weight calculation. It is important to reduce these interfering interactions in order to obtain the accurate molecular weight distribution.

~ Interfering interactions likely to be observed ~

Interactions between the analyte and the packing materials

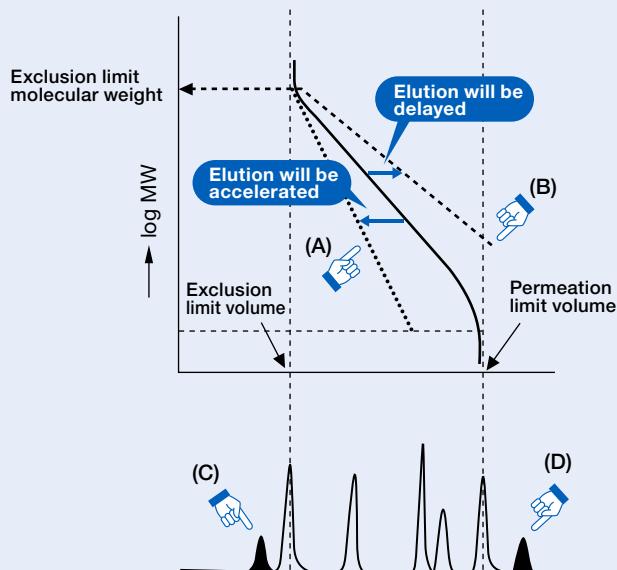

- ◆ Hydrophobic interaction
 - The analyte is adsorbed on the packing material. This delays the analyte elution and results in under estimating the analyte's molecular weight. See (B) and (D).
- ◆ Ionic interaction
 - (1) Ion Exclusion
 - The analyte is repelled from the packing material. This accelerates the analyte elution and results in over estimating the analyte's molecular weight. See (A) and (C).
 - (2) Ion Exchange
 - The analyte is adsorbed onto the packing material. This delays the analyte elution and results in under estimating the analyte's molecular weight. See (B) and (D).

Interaction within and between the analyte

- ◆ Ionic repulsion effects observed within the multivalent macromolecules causes structure expansion
 - This accelerates the analyte elution and results in over estimating the analyte's molecular weight. See (A).
- ◆ Association between the molecules
 - This accelerates the analyte elution and results in over estimating the analyte's molecular weight. See (A).

Interactions between the analyte and the solvent

- ◆ The multivalent ion in the solvent works as a bridge to bind ionic molecules (analyte).

Methods to reduce interactions

Aqueous SEC (GFC)

Ionic interaction

- ◆ Add salt into the eluent

Hydrophobic interaction

- ◆ Increase the analyte dissociation
 - Cationic polymer → Lower the eluent pH
 - Anionic polymer → Higher the eluent pH
- ◆ Lower the eluent polarity
 - e.g. Add acetonitrile or methanol

Organic SEC (GPC)

Ionic interaction

- ◆ Add salt into the eluent
 - e.g. Add LiBr to DMF
 - Add CF_3COONa to HFIP

Hydrophobic interaction

- ◆ Lower the eluent polarity
 - e.g. Change the eluent from DMF to THF

Hydrophilic interaction

- ◆ Increase the eluent polarity
 - e.g. Change the eluent from THF to DMF
